Summary

City of Westminster College required a security system for its existing new buildings, as well as its grounds, that would provide:

- A secure environment for students, staff and visitors
- Effective access control allowing continuous monitoring
- Easy-to-use, centrally controlled integrated system
- Compliance with health and safety regulations
- Integration into the college's enrolment and student software

GES installed a fully integrated system that met all their requirements and provided significant benefits.

GES Specialise in:

- Access Control
- CCTV
- Door Entry
- Intruder Alarms
- Fire Alarms
- Service & Maintenance
- Security Consultancy

Case Study: Fully Integrated Security System for City of Westminster College

GES Security Services designed and installed an advanced integrated security system for the elegant new £102m development for the City of Westminster College.

Full security that blends into the building's design

The building is of an open design, with extensive use of glass, which presented a number of challenges for the GES design team. The college was anxious that the new system would not only meet their security requirements, but would also complement the aesthetics of the building.

A solution that is user-friendly, sensitive and cost-effective

GES devised a discreet, fully operational integrated security management system that is aesthetically pleasing. Despite the system's sophistication, it is easy to use and meets all of the college's requirements. The installations included:

- IP CCTV and access control systems that allow for different levels of access
- Wireless network of 85 IP cameras and a 264-door access control system
- IDL Fastlane units at the entrance to monitor activity on the premises
- Cabled intruder alarm system

How the City of Westminster College benefitted

- A new, easy-to-use, centrally controlled system
- Remote access capability, which reduces the number of site visits needed, saving time
- Unobtrusive, discreet installation, offering the highest levels of protection
- Substantial cost savings through efficient installation and system design
- Full training in proper and effective use of the systems
- Seamless integration into the colleges existing hardware and software systems
- Smart technologies, providing cashless vending
- GES continue to provide exceptional support and maintenance
- The most appropriate system that was delivered on time and on budget

“GES have provided an excellent service that has been responsive and extremely helpful, particularly with our Speed Gates where their mediation was invaluable in solving a complex problem.”

*Robin Pellett, Estates Manager
City of Westminster College*
